## COMMENTS

- NO GIT Sub Branches 🙅

- No responsiveness 🙅

- Love the about page, very nice animations 👍
- Good use of functions and loops 👍
- Very nice validation logic 👍
- Great binding of the "questions" to DOM elements
- Here I would have use "form" elements as when pressing the "Enter" key on my keyboard, nothin happens

```
<div class="container">
  <div class="app">
    <h1>Math Riddles</h1>
    <div class="quiz">
      <h2 id="question"> Questions</h2>
      <div id="answer-buttons">
        <button class="btn" id="option0"> Answer 1</button>
        <button class="btn" id="option1"> Answer 2</button>
        <button class="btn" id="option2"> Answer 3</button>
        <button class="btn" id="option3"> Answer 4</button>
      </div>

      <button id="next-btn" onclick="move()">Next</button>

      <h2>Remaining question:</h2>
      <div id="myProgress">
        <div id="myBar"></div>
      </div>

    </div>
  </div>
</div>
```

- Very nice project, near perfect, unfortunately no responsiveness, but great start 🎉
