COMMENTS

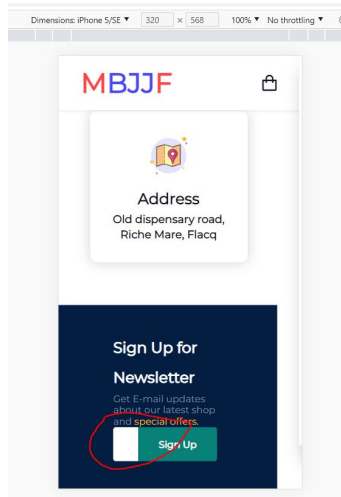

- NO GIT Sub Branches 👎

- Good responsiveness 👍

- Responsiveness issue with signup form (Not "enough" input) 👎

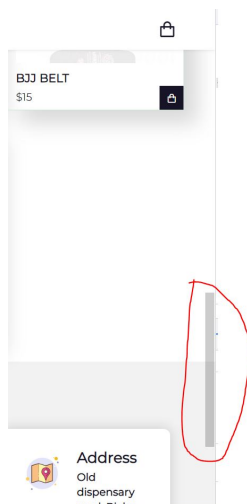

Also you could have added some validation here. For example a proper email should be used before showing alert. :-1:

```
function myfunction() {
    alert("Successfully signed in");
}
```

- In the following code a "form" element should have been used 👎

```
<div class="form">
  <input type="text" placeholder="Your email address" name="mail"
required>
  <button onclick="myfunction()" class="normal">Sign Up</button>
</div>
```

- Nice transparent scroll bar 👍

- Following code returns an error: 👎

```
const btn = document.getElementById('btn');

btn.addEventListener('click', function handleClick(event) {
  event.preventDefault();

  const firstNameInput = document.getElementById('first_name');

  // Send value to server
  console.log(firstNameInput.value);

  // 🖱️ clear input field
  firstNameInput.value = '';
});
```

"btn" is undefined as there is no DOM element with id "btn"

- Clicking on an item should open the cart if the cart wasn't opened, as the user has no way of knowing that something just happened. 👎
- Good use of functions and loops 👍
- Overall good start but some functionalities are missing !
